9. How many (-4)'s are there in (-20)?

10. (-400) divided into 10 equal parts gives _____.

Objective type questions

11. Which of the following does not represent an Integer?

(i) $0 \div (-7)$ (ii) $20 \div (-4)$ (iii) $(-9) \div 3$ (iv) $(12) \div 5$

12. $(-16) \div 4$ is the same as

(i) $-(-16 \div 4)$ (ii) $-(16) \div (-4)$ (iii) $16 \div (-4)$ (iv) $-4 \div 16$

13. $(-200) \div 10$ is

(i) 20 (ii) -20 (iii) -190 (iv) 210

14. The set of integers is not closed under

(i) Addition (ii) Subtraction (iii) Multiplication (iv) Division

DO YOU KNOW?

One of the earliest exposition on negative numbers is by the 7th century Indian Mathematician and Astronomen Brahma gupta, who in his famous text "Brahmasphutasuddhanta" gave a very clear understanding of the concept of zero and consequently the negative integers. His texts were in the form of poetry which when translated reads something like this…

Rule for dealing with positive (fortune) and negative (debt) numbers.

- A debt minus zero is a debt
- A fortune minus zero is a fortune.
- Zero minus zero is a zero.
- A debt subtracted from zero is a fortune.
- A fortune subtracted from zero is a debt.
- The Product of zero by a debt or fortune is zero.
- The Product of zero by zero is zero.
- The Product of quotient of two fortunes is one fortune.
- The Product of quotient of a debt and a fortune is a debt.
- The Product or quotient of a fortune and a debt is a debt.

- The story of mathematics

1.6 Statement Problems on Integers using all Fundamental Operations.

We have learned how to add, subtract, multiply and divide integers. This section will review the rules learned for operations with integers.

All the mathematical problems are life oriented problems.
