(iv) Construction of angle of measure 90°

Step 1: Construct angle 120° [Refer Construction of angle of measure 120° (ii)].

Step 2: With C as center, draw an arc of convenient radius in the interior of $\angle CAD$.

Step 3: With the same radius and D as center, draw an arc to cut drawn in step 3 at E.

Step 4: Join AE. Then $\angle BAD = 90°$ is the required angle

Exercise 5.5

1. Construct the following angles using ruler and compass only.

   (i) 60° (ii) 120° (iii) 30° (iv) 90°

   (v) 45° (vi) 150° (vii) 135°

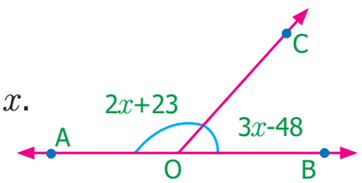

Exercise 5.6

Miscellaneous Practice problems

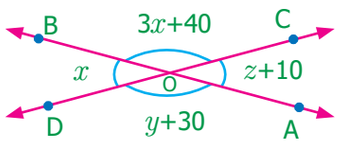

1. Find the value of x if $\angle AOB$ is a right angle.

2. In the given figure, find the value of x.

3. Find the value of x, y and z

4. Two angles are in the ratio 11: 25. If they are linear pair, find the angles.

5. Using the figure, answer the following questions and justify your answer.

   (i) Is $\angle 1$ adjacent to $\angle 2$?

   (ii) Is $\angle AOB$ adjacent to $\angle BOE$?

   (iii) Does $\angle BOC$ and $\angle BOD$ form a linear pair?

   (iv) Are the angles $\angle COD$ and $\angle BOD$ supplementary?

   (v) Is $\angle 3$ vertically opposite to $\angle 1$?
