Dividing by 6 on both sides

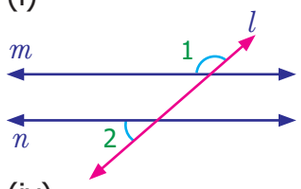

$\frac{x}{6} = \frac{180^\circ}{6}$ gives, $x = 30^\circ$.

Now, $y = 2(30^\circ) = 60^\circ$.

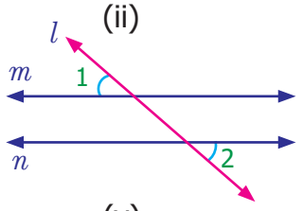

## Exercise 5.2

1. From the figures name the marked pair of angles.

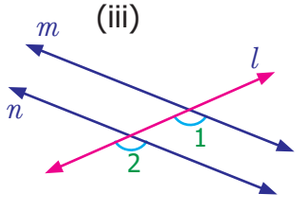

(i)

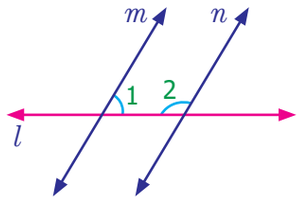

(ii)

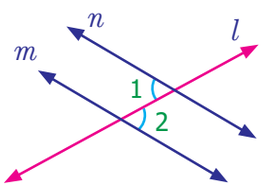

(iii)

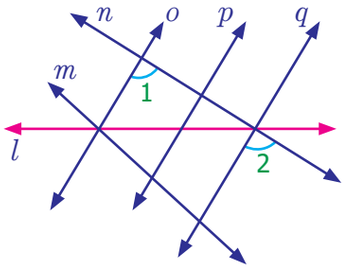

(iv)

(v)

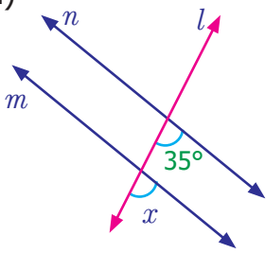

(vi)

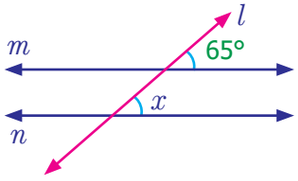

2. Find the measure of angle $x$ in each of the following figures.

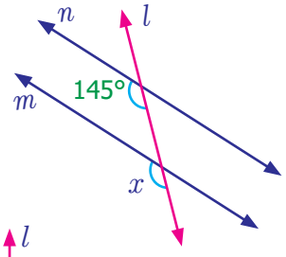

(i)

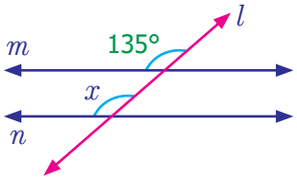

(ii)

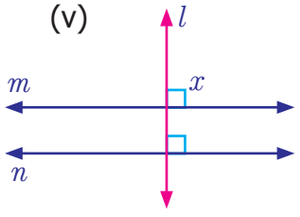

(iii)

(iv)

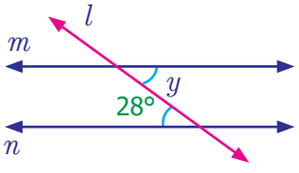

(v)

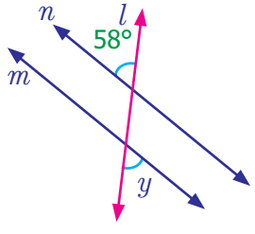

3. Find the measure of angle $y$ in each of the following figures.

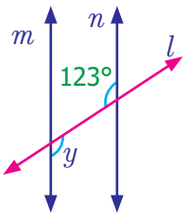

(i)

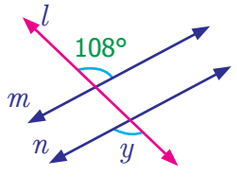

(ii)

(iii)

(iv)
